

T-31-25
BF 960

N-Channel Dual Gate MOS-Fieldeffect Tetrode · Depletion Mode

Applications: Input- and Mixerstages especially for UHF TV-tuners up to 900 MHz

Features:

- Integrated Gate protection diodes
- High cross modulation performance
- Low noise figure
- High AGC-range
- Low feedback capacitance
- Low input capacitance

7. Taping and Reeling

T-91-20

7.1. Taping of TO-92 Transistors

Standard reeling: Taped on reel, reeled together with a paper film.

7.1.1. Order Numbers

Add the taping-code to the order number.

Example:

- ¹⁾ 06 = View on flat side of transistor, view on gummed tape
- 05 = View on round side of transistor, view on gummed tape
- ²⁾ Additional marking "0": taping without paper film
- Additional marking "Z": Zigzag folded tape in special box. Marking for orientation of transistor not necessary, because box can be opened on top or bottom

Example for order No.: BC 237 C DU Z

Fig. 7.3 Dimensions of tape in mm

7.1.2 Quantity of devices

- 1 000 devices per reel
- 2 000 devices per folded tape in special box.

7.2. Taped transistors in SOT 23 and SOT 143 case

7.2.1. Designation

a) Standard taping

Designation is attached with code GS 08 in case of standard taping. Example for normal version transistors as standard taped: BF 569-GS 08.

Example for R-version transistors as standard taped: BF 569 R-GS 08.

In case of standard taping, the transistor orientation on the tape is shown in Fig. 7.4 and Fig. 7.5.

b) Reverse taping

Designation is attached with code GS07 in case of reverse taping. Example for normal version transistors as reverse taped: BF 569-GS 07.

Example for R-version transistors as reverse taping: BF 569 R-GS 07.

In case of reverse taping, the transistor orientation on the tape is shown in Fig. 7.6.

Regarding MOS-FET and MES-FET devices, reverse taping is at present not available.
