

How to watch IPTV channels on the AB CryptoBox 652HD Combo

1. Push the **MENU** button and go to “Settings” → “System Settings”
2. Set the “Load M3U file mode” value to “Auto”
3. Push the **EXIT** button until return back
4. Plug in the empty USB flash disc to the AB CryptoBox 652HD Combo
5. Push the **MENU** button and go to “X-tras” → “Network Apps” → “IPTV”
6. The “M3U File List” is empty (the receiver has automatically created the “IPTV” folder on the inserted USB flash disc)
7. Push the **EXIT** button until return back (for the question “Do you want to exit” select “YES” and push the **OK** button)
8. Push the **MENU** button and go to “Multimedia” → “Remove Device Safely”
9. Plug out the USB flash disc from the AB CryptoBox 652HD Combo
10. Plug in the USB flash disc to the computer and prepare M3U files in the “IPTV” folder on the USB flash disc.

For example: You can use the Collection of 6000+ free IPTV channels on <https://github.com/freearhey/iptv>. As You see Playlists by country on the page below, for example for Germany download the file “de.m3u” to the “IPTV” folder on the USB flash disc, for example for United Kingdom download the file “uk.m3u” to the “IPTV” folder on the USB flash disc, etc.

11. Plug out the USB flash disc from the computer
12. Plug in the USB flash disc with M3U files in the “IPTV” folder to the AB CryptoBox 652HD Combo
13. Push the **MENU** button and go to “X-tras” → “Network Apps” → “IPTV”
14. Select the M3U file and push the **OK** button
15. Select the IPTV channel (inside the selected M3U file) and push the **OK** button
16. Push the **OK** button for disappearing or appearing of the IPTV channel list
17. Push the **EXIT** button until return back (for the question “Do you want to exit” select “YES” and push the **OK** button)

Known issues

1. The set-top-box does not detect the right screen mode (4:3 or 16:9) for some IPTV channels
2. The stable bandwidth for streaming is not guaranteed on the Internet so the set-top-box can be not able to launch any selected IPTV channel or to be losing the synchronization through watching

Tested with the V1.14.20092 firmware, connected to the 20Mb/s VDSL line modem using the UTP cable.
